1. The first part of the assignment is to identify the main components of the system. This includes the hardware, software, and data. The hardware components are the physical devices that make up the system. The software components are the programs and applications that run on the hardware. The data components are the information that is processed and stored by the system.

2. The second part of the assignment is to describe the flow of data within the system. This involves identifying the input and output of the system and the internal processes that transform the input into the output.

Assignment 1: System Analysis

3. The third part of the assignment is to evaluate the system's performance. This involves measuring the system's output against its intended purpose and identifying any areas for improvement.
